What did you like about this workshop?

Lots of references/documentation/ dozens of useful external resources	Flexibility of the course, material in (a)synch videos (lectures, preferred software, methodologies, etc.)	the content (booklet + videos) is just great. Definitely a reference!	I learned a lot about different applications and programs that I will try in real cases	the didactical set up
The hands-on tasks, the accountability/buddy idea, great structure of the course material and weekly lectures	The booklet + video combo made the topic manageable and easy to follow. The task of the week was useful/practical	great combination of booklet and videos	helpful further material/ literature	the reserved classroom style + accountability buddy strategy
		the topic of reproducibility that made the task of working with/for each other overwhelming		

What should we do better next time?

A good booklet summarising whether to openly create/or publish and which the correct specific purpose of these tools would be	<- I also vote for the pseudo-project idea!			Using the discussions in the Mattermost sessions was/ had cumbersome only, quite hard because of how typing hard	
It was a bit difficult to get used to the new communication channels like community chats I had trouble keeping up with it	maybe add the topic "managing/workflows" to our weekly catch up, more to do/apply at home/you guided with e.g R practice	a quick illustration on how to actually use different tools/ have been very helpful e.g with/a more/project	setting to share & catch/up then/team with members of the workshop should/be recording in case one/ cannot make it... learn more synchronous to learning the course!	

Anything else you'd like to share?

I was really happy my first all-round experience and gained much more/than I expected to learn/from the whole thing. greater exercises like/this	it was so nice all the things that I learned along and made clear that I really/enjoyed the workshop/and have/gained new insights that/I can use/in my own work			I liked this course very much and would definitely recommend to other people interested in this topic
	I picked up a lot of useful skills during this workshop as well as the understanding how to make my research more open and reproducible			I think this workshop is a very great ice-breaker in terms of getting started with working reproducibly

How did you like the...

- Booklet
- Videos
- Tasks of the week
- Buddy system
- Weekly meetings
- Mattermost chat
- Miro board
